Projects

Spotify Playlist Generator
- Cloud hosted React application that utilizes machine learning to create new playlists based on any Spotify users' current playlists.
  https://recommendationsforspotify.com

Done-wrightnow.com
- React application created for local artists. Pulls all product data from their Etsy account and dynamically loads it to the website. Any changes to products or sections will automatically get updated on the site.
  https://done-wrightnow.com

Algorithmic Trading System
- Java program that scrapes live data from NASDAQ website and places trades to Collective2.com to measure algorithm performance in a real-time market environment .

Experience

Snowmaker   Oct 2019 - Jan 2020
Vail Resorts, Breckenridge CO
- Worked with a diverse team to coordinate the moving and maintenance of snow making equipment.
- Filed plant reports to ensure proper operation and timely maintenance of mission critical infrastructure.
- Worked in hazardous conditions that required a high standard for safety and communication with partner during starting and stopping of snow guns.

Finish Carpentry   Nov 2018 - Aug 2019
J Pierce and Co, Kennewick WA
- Installed custom cabinetry, closet systems, and trim with a high standard for quality and attention to detail.
- Efficiently and independently carry out assigned tasks as part of a larger team.
- Built closet systems to specification and requirement defined by building plans.
- Effectively communicated any problems, shortage of materials, and equipment malfunctions to team leaders.
